

Seltrax Website

the marketing site & help center

The public site at seltrax.com: what it's for, how it's built, every page it serves, and what still needs doing before it's ready. The store builder and seller dashboard live in a separate app and aren't covered here.

PRODUCTION seltrax.com	FRAMEWORK Next.js 16.1	ROUTES 23 + 31 generated	AS OF 15 Sep 2026 · 8ebbc1c
---------------------------	---------------------------	-----------------------------	-----------------------------------

01 Overview

Seltrax is an ecommerce platform for online sellers in Pakistan. This site explains the product, answers the usual objections (price, cash on delivery, couriers, switching platforms) and sends visitors to sign up at `admin.seltrax.com`, which it only links to.

Goals

GOAL	HOW THE SITE SUPPORTS IT
Get sign-ups	"Start selling" / "Create your store" buttons on every page, plus a shared closing CTA and footer
Book demos	"Book a demo" opens a Google Calendar booking page
Rank in search	Per-page titles and canonical URLs, sitemap, robots rules, structured data, social preview images
Win switchers	<code>/compare</code> with a cost calculator, <code>/migrate</code> , <code>/pricing</code>
Cut support load	Help center at <code>/help</code> with 20 step-by-step articles

Who it's for

- Small and mid-sized sellers in Pakistan who take most orders as **cash on delivery**
- They ship with **TCS, Leopards or M&P**

- They run the business from a phone, often selling through WhatsApp and Instagram
- They're on Shopify or WooCommerce today, or haven't launched yet

Core messages

The site repeats these consistently. New copy should follow them.

One plan, everything included

No apps, plugins, premium themes or per-seat fees.

Priced in rupees

Monthly or yearly billing, no dollar exposure.

COD-first

Confirmation, courier booking, tracking, returns and remittance built in.

Fast

One JSON-rendered theme and no plugin scripts.

Live the same day

No hosting, code or developer needed.

BILLED MONTHLY

Rs 1,999 / month

BILLED YEARLY

Rs 1,349 / month -32%

Rs 16,188 a year · saves Rs 7,800

02 Tech stack

LAYER	CHOICE	VERSION
Framework	Next.js, App Router with React Server Components	16.1.1
UI runtime	React	19.2.3
Language	TypeScript, strict mode	^5
Styling	Tailwind CSS v4; shadcn-style tokens in <code>app/globals.css</code>	^4
Animation	framer-motion	^12.23
Icons	lucide-react	^0.562
Database	PostgreSQL through Prisma 7 with the <code>@prisma/adapters-pg</code> driver	^7.2
Email	Resend with React email templates	^6.6
Fonts	Inter (body/UI) and Instrument Serif (display accents) via <code>next/font</code>	
Analytics	Google Analytics 4 (<code>G-LD6SF4KEX4</code>), loaded after the page is interactive	
Lint	ESLint 9 with <code>eslint-config-next</code>	^9

Scripts: `dev`, `build`, `start`, `lint`. The `@/*` import alias points at the repo root.

Directory layout

```
app/
  layout.tsx           fonts, metadata, GA4, structured data, TopLoader, MotionProvider
  page.tsx             homepage
  (products)/          route group, adds no URL segment: 15 product pages
  about/ blog/ case-studies/ compare/ help/ help/[slug]/ pricing/ reviews/
  api/health/ api/waitlist/
  sitemap.ts robots.ts opengraph-image.tsx twitter-image.tsx
components/
  home/               navbar, footer, shared primitives (ui.tsx), homepage sections
  <feature>/sections.tsx one file of sections per page
  integrations/ help/ designs/ resources/ data files + listing/detail renderers
  emails/             Resend templates
lib/
  config.ts           external URLs, env-overridable
  prisma.ts utils.ts generated/prisma/
prisma/               schema.prisma, migrations/
public/               landing photos, brand logos, integration badges
```

How a page is put together

Each `page.tsx` is a small server component. It exports `metadata` (title, description, canonical URL) and renders a `<main>` containing its sections in order, ending with `<CTAFooter />`. The sections are client components because nearly all of them animate or respond to input. Most product pages follow the same order:

There's no global header. Each hero renders `HomeNavbar` itself, over a full-bleed photo that fades to white.

Content lives in data files

There's no CMS. Collections are typed TypeScript files, and the listing page, detail pages and sitemap all read the same data.

COLLECTION	FILE	DRIVES
Integrations · 11	<code>components/integrations/data.ts</code>	Directory, detail pages, sitemap
Help articles · 20 in 6 sections	<code>components/help/docs.ts</code>	Help home, articles, sitemap, prev/next order

COLLECTION	FILE	DRIVES
Store designs · 12 categories, 0 designs	components/designs/data.ts	/designs
Blog posts · 5 categories, 0 posts	components/resources/blog-data.ts	/blog
Case studies · 6 categories, 0 entries	components/resources/case-studies-data.ts	/case-studies
Navigation	components/home/nav-data.ts	Desktop mega menu, mobile menu

Dynamic routes

`/integrations/[slug]` and `/help/[slug]` are built at deploy time with `generateStaticParams()` and `dynamicParams = false`, so unknown slugs return 404. Titles and canonicals come from each data entry.

Configuration

CONSTANT	ENV VAR	DEFAULT
APP_URL	NEXT_PUBLIC_APP_URL	https://admin.seltrax.com
LOGIN_URL	NEXT_PUBLIC_LOGIN_URL	APP_URL/login
REGISTER_URL	NEXT_PUBLIC_REGISTER_URL	APP_URL/register
ANDROID_APP_URL	NEXT_PUBLIC_ANDROID_APP_URL	empty, so buttons read "Coming soon to Android"
HEALTH_URL	HEALTH_URL	https://api.seltrax.com/health/all
Secret	DATABASE_URL	Prisma client and config
Secret	RESEND_API_KEY	Waitlist emails

`next.config.ts` has one redirect: `/health` goes to the UptimeRobot status page (temporary, not permanent).

04 Pages & navigation

Header menu

MENU	CONTENTS
Product	Storefront: Designs, Mobile-first, Page speed, Page builder Selling: Cash on Delivery, Courier dispatch, Checkout, Orders Manage: Analytics, Staff accounts, Mobile app Grow: Migrate, Integrations, Launch in minutes
Company	About Seltrax: About, Compare, Reviews Get in touch: Book a demo, Login, Create your store
Resources	Blog, Case studies, Help & demo, Platform status (external)
Pricing	Direct link. Login and Start selling sit on the right.

Mega menus open on hover or focus, wait 160 ms before closing, and close on Escape. On phones the menu becomes an accordion. The footer sits inside a "Your store could be live tonight" card, with Product, Get started and Compare columns.

Core pages

ROUTE	PURPOSE	SECTIONS
/	Homepage	Hero with 3 interactive cards and brand logos, Features, How it works, Mobile, Testimonials, FAQ (with FAQ structured data)
/pricing	One plan, monthly/yearly toggle	Plan card, 9 included feature groups, never-pay list and third-party costs, compare teaser, FAQ
/compare	vs Shopify and WooCommerce	Tabs saved in the URL hash, head-to-head, scored feature table, 12-month cost calculator, "which fits you", FAQ
/about	Company story	Hero, story, mission and facts, values, CTAs. A Team section exists but isn't shown.
/reviews	Seller reviews	Featured review and a grid filterable by topic

Product pages

ROUTE	FEATURE	INTERACTIVE ELEMENT
/designs	Ready-made designs by category	Category rail; empty state until designs exist
/mobile-first	360px-first storefronts	Device simulator
/page-speed	Load speed	Load race, revenue calculator
/page-builder	Build any page from sections	Live builder

ROUTE	FEATURE	INTERACTIVE ELEMENT
<code>/cash-on-delivery</code>	COD order lifecycle	Reconciliation board
<code>/courier-dispatch</code>	TCS, Leopards, M&P booking	Dispatch console, label preview, tracking timeline
<code>/checkout</code>	One-page phone-first checkout	Field configurator
<code>/orders</code>	COD-staged order inbox	Orders inbox
<code>/analytics</code>	Sales, funnel, delivered revenue	Dashboard
<code>/staff-accounts</code>	Unlimited staff, per-area permissions	Team builder, per-seat cost comparison
<code>/mobile-app</code>	Android app	Download button, gated by env var
<code>/migrate</code>	Move from Shopify or WooCommerce	Migration wizard, cost after switching
<code>/launch</code>	Go live in minutes	Launch simulator
<code>/integrations</code>	Integration directory	Search and category rail
<code>/integrations/[slug]</code>	Integration detail	Overview, features, setup steps, specs, related

Integrations: Facebook Pixel, Google Analytics, Microsoft Clarity, Google Search Console, TCS, Leopards Courier, M&P, WhatsApp order updates, SMS notifications, Mailchimp, Trusted Badges.

Resources

ROUTE	PURPOSE	NOTES
<code>/blog</code>	Article listing	Shared listing: category rail in the URL hash, newest first, empty state
<code>/case-studies</code>	Case-study listing	Same listing; cards can show a headline result
<code>/help</code>	Help center	Sticky sidebar, search by title and summary, "Browse topics" toggle on phones
<code>/help/[slug]</code>	Help article	Breadcrumb, read time, steps, tips and warnings, "On this page" contents, prev/next, demo CTA
<code>/health</code>	Platform status	Redirects to UptimeRobot

Help sections: Getting started (5) · Selling & orders (4) · Shipping (3) · Store & design (2) · Growth (2) · Team & account (3).

05 Backend

Data model

One Prisma model, from migration `20251231090235_emails`. It stores waitlist sign-ups, not platform users.

```
model User {
  id          Int      @id @default(autoincrement())
  email       String   @unique
  name        String?
  whatsappNumber String? @unique
  createdAt   DateTime @default(now())
  updatedAt   DateTime @updatedAt
}
```

POST /api/waitlist

1. Takes `{ "email": string }` and looks up the email. If it exists, returns 200 with "You are already on the #id in line".
2. Otherwise creates the row.
3. Sends "You're on the waitlist!" from `hello@seltrax.com` via Resend, with the queue position.
4. Returns 201 with the position, or 500 if the email fails.

Not in use: no page on the site calls this endpoint. It's left over from the pre-launch waitlist.

GET /api/health

- Fetches `HEALTH_URL` uncached, with a 12-second timeout.
- Passes the JSON report through as 200, even if the upstream returned 503.
- Returns 502 with a message if the upstream is unreachable, times out or sends unreadable JSON.

Not in use: `/health` redirects to UptimeRobot, so nothing reads this route.

06 SEO

ITEM	IMPLEMENTATION
Default metadata	Root layout: title, description, keywords, OpenGraph, Twitter large card, index/follow
Per-page metadata	Every page sets its own title, description and canonical URL
Structured data	Organization and SoftwareApplication (offer: 1349 PKR per month) site-wide; FAQPage on the homepage
Sitemap	23 static routes plus every integration and help article, priority 0.5–1.0
Robots	Allow everything except <code>/api/</code>
Social image	1200×630 image generated with <code>next/og</code> , reused for Twitter
Icons	<code>app/icon.png</code> and <code>app/apple-icon.png</code> . Don't set <code>metadata.icons</code> , which overrides them.
Honest content	No review structured data until reviews are real. No logos the company hasn't approved; integrations without a logo get a monogram.

07 Design system

TOKEN	VALUE	USE
Accent	#2B7FFF · soft #5B9CFF	Brand blue, <code>--primary</code>
Ink	#171717	Primary buttons, headings
Text	#3A3D37 · #5C6058 · #6B6F66 · #8A8E84	Body down to faint labels
Surfaces	#FFF · #F6F7F3 · #F3F4F0	Page, tinted panels
Borders	#E4E6DF · #EEF0EA	Cards, dividers
Success	#0F9D58 · #0F7A44	Savings, "Included"
Shape	Pill buttons and chips, 16px card corners	Light theme only

Typography

- **Inter** for all body and UI text; small by design, about 11–13 px on phones and 13–15 px on desktop.
- *Instrument Serif italic* through `<Serif>`, as the accent line in almost every heading: serif line on top, semibold sans below.
- Section headings share `h2Class`: centered, 26 → 34 → 42 px.

Shared building blocks

`Container` (1200 px column), `Reveal` (fade up on scroll, once), `Serif`, `Logo`, `Face`, `Avatar`, `Flag`, and the shared `shadow` style, all in `components/home/ui.tsx`.

Recurring patterns

- **Hero**: full-bleed photo, white wash at top, fade to white at bottom, dark kicker pill with an accent icon.
- **Category rail and grid** (designs, integrations, blog, case studies): chips on phones, sticky list on desktop, selection in the URL hash, counts, designed empty state.
- **FAQ accordion**: numbered rows, first item open.
- **Dark CTA band** with white primary and outline secondary buttons.
- **Comparison tables** with the Seltrax column tinted and yes / partly / no icons.

Motion & accessibility

- With the OS reduce-motion setting on, movement is skipped and only fades run.
- A 3 px blue progress bar shows during page changes and gives up after 8 seconds.
- Tabs, accordions, menus, the active rail item, ratings and breadcrumbs all carry ARIA states and labels. Decorative images have empty alt text.

08 Requirements

AREA	REQUIREMENT
Responsive	Mobile-first; every section must work at 360 px.
Performance	Every page is static except <code>/api/*</code> . Analytics load after the page is interactive. Hero photos load first; fonts swap in.
Rendering	Pages are server components and sections are client components. Configs holding icon components must be built on the client side.
Links	Internal links use <code>next/link</code> ; external links open in a new tab with <code>noopener</code> . No dead links: show a disabled "coming soon" state instead.
Honest copy	Comparisons don't print competitor prices, which change often, and say when a competitor fits better. Placeholder testimonials must be replaced before launch.

09 Content operations

TO...	DO THIS
Add an integration	Append to <code>integrations</code> in <code>integrations/data.ts</code> ; optionally add a 96×96 badge in <code>public/integrations/</code> . Directory, detail page and sitemap update automatically.
Add a help article	Append to <code>articles</code> in <code>help/docs.ts</code> and list its slug in a section. Check menu paths against the live dashboard.
Add a store design	Append to <code>designs</code> with a category, a screenshot in <code>public/designs/</code> and an optional preview URL.
Publish a post or case study	Append a listing entry. Set <code>href</code> only once a detail page exists. Case studies must be real and approved by the seller.
Change pricing	Update <code>MONTHLY</code> and <code>YEARLY_PER_MONTH</code> in <code>pricing/sections.tsx</code> , and every hard-coded "Rs 1,349" (see issue 7).
Change navigation	Edit <code>NAV</code> in <code>home/nav-data.ts</code> .
Add a page	Create <code>page.tsx</code> (product pages in <code>(products)/</code>) with metadata and canonical, put sections in <code>components/<feature>/sections.tsx</code> , end with <code>CTAFooter</code> , add to the sitemap and menu.

10 Open issues

Blocks launch

Inconsistent

Engineering

CONTENT NOT READY

- 01 **Testimonials and reviews are placeholders** Blocks launch
The homepage testimonials and all of `/reviews` show "Seller name / Store name" filler, and `/reviews` is in the sitemap.

- 02 **Team section is placeholder** Blocks launch
Currently hidden on `/about` until real names and photos exist.

- 03 **Designs, blog and case studies are empty** Blocks launch
These pages only show "coming soon" states but are linked in the menu and listed in the sitemap.

- 04 **No blog or case-study detail pages** Engineering
Listing cards have nothing to link to yet.

- 05 **Homepage client logos need confirming** Blocks launch
"Trusted brands working with us" shows trüke, GOVO, Lemonade and uppercase. Confirm they're real customers who agreed to be shown.

- 06 **Claims need backing** Inconsistent
"About 2x faster than Shopify", "most sellers launch in under an hour", and the comparison table scores.

INCONSISTENCIES

- 07 **Price stated two ways** Inconsistent
`/pricing` says Rs 1,999 monthly or Rs 1,349 billed yearly. These say "Rs 1,349/month" with no yearly qualifier:
- homepage FAQ, footer banner and menu CTA card
 - about page and reviews CTA
 - site description, social image and structured data
 - the `/compare` calculator, which uses $1,349 \times 12$

08 **"Start Free Trial" with no trial** Inconsistent

The homepage hero promises a trial; everywhere else says only "No credit card needed to start".

09 **Stale code comments** Engineering

Comments point to `components/landing/*`, which no longer exists, and `lib/config.ts` says `/api/health` is shown on `/health`.

ENGINEERING

10 **Unused API routes** Engineering

Nothing calls `/api/waitlist` or `/api/health`. Remove them or wire them back up.

11 **Waitlist route needs hardening, if kept** Engineering

- No email validation and no rate limiting
- Malformed JSON throws outside the error handler
- The row is saved before the email is sent, so a failed send returns 500 for a saved sign-up
- `AlreadyWaitlistTemplate` is imported but unused

12 **Duplicated constants** Engineering

The demo link is copied into about 10 files, the site URL into 3, and prices into many. Import them from one place.

13 **No custom 404 or error page** Engineering

Unknown URLs get the default Next.js 404.

14 **No automated tests** Engineering

Only ESLint runs.

15 **README is the create-next-app template** Engineering

It should cover env vars, Prisma setup and the content operations above.

16 **Route-group move not committed** Engineering

The 15 product pages moved into `app/(products)/` are staged but not committed. URLs don't change.

11 Local development

```
npm install
# .env.local
# DATABASE_URL=postgresql:// ...    only needed for /api/waitlist
# RESEND_API_KEY=re...              only needed for /api/waitlist
# NEXT_PUBLIC_ANDROID_APP_URL=...   optional
npx prisma generate                 # after schema changes
npx prisma migrate dev              # apply migrations locally
npm run dev                         # http://localhost:3000
npm run lint
npm run build
```

The marketing pages don't depend on the database or Resend at runtime. Without those env vars, only `/api/waitlist` breaks.
